Biocompatibility

Silicone 40A Resin is being evaluated as a skin contacting device in accordance with ISO 10993-1 for the following biocompatibility endpoints:

ISO Standard	Description
ISO 10993-5:2009	Pending test data
ISO 10993-23:2021	Pending test data
ISO 10993-10:2021	Pending test data

¹ The measured properties have been determined through internal testing and will be updated with results from an external lab.

² Material properties may vary based on part geometry, print orientation, print settings, temperature, and disinfection or sterilization methods used.

³ Data for post-cured samples were measured on Type C tensile bars printed on a Form 3 printer with 100 µm Silicone 40A Resin settings, washed in a Form Wash for 20 minutes in 80% Isopropyl Alcohol / 20% Butyl Acetate, and post-cured at 60 °C for 30 minutes submerged in water in a Form Cure.

Silicone 40A Resin Dynamic Mechanical Analysis (DMA)

A DMA curve from -150 deg C to 180 °C at 3 °C/min is shown. A glass transition is observed at -107 °C, and a crystalline melting transition is observed at -37 °C followed by a rubbery plateau to the conclusion of the test at 180 °C.
